

PS

Project Typographical Wallpaper

Note: I found this tutorial and there was no author information included.

Step 1 - Creating a Background

First, open a blank document with the size 1920×1200 pixels. Fill the background with color #242424. Duplicate the background layer and name it Film grain. Then go to **Filter – Artistic – Film Grain**.

Apply the settings shown to the right.

Set layer opacity to 50%.

So far your wallpaper should look like this.

Step 2 - Lightning

Create a new layer and name it Lighting. Then select the **Radial Gradient** Tool with black and white color.

Draw the gradient as shown to the right.

Set layer to Overlay and opacity to 55%.

You should have something like this.

Step 3 - Adding Brushes

Download Adys Grunge Brushes.

Create a new layer and brush around a little bit.

Set layer opacity to 15%.

Download Concrete texture, place it in your document.

Set it to **Overlay** and opacity to 10%.

Step 4 - Creating Main Text

Download BEBAS font, create a new layer and type your text. I chose 350 pt size with smooth mode. Color really doesn't matter. Name layer PEACE.

Step 5 - Adding Background Text

Lower your text opacity to around 15%. Create a new group (**Layer - New - Group**) and name it Words.

Create new type layers in this group and start typing. Try to use different fonts and sizes. Try to avoid large spaces between words. The fonts I used:

- Arial
- Cambria
- Candara
- Impact
- Tahoma
- Times New Roman
- Verdana

And little bit more default fonts

And some free fonts from dafont.com

- Colaborate, Extravaganzza

Step 6 - Creating the Effect

When you're done, duplicate your Words group (Layer - Duplicate Group) and merge it (Ctrl+E).

Make invisible your unmerged Words group. Find your large text layer (in my case it's PEACE), hold CTRL (Command on mac) and click on the layers thumbnail. That should load it's selection.

Then click on your merged words layer and press **Ctrl+J**. If you make invisible your merged Words layer (and unmerged Words group is still invisible) you should get something like this.

Step 7 - Creating Background Text Effect

Make merged Words layer visible again and apply following layer style.

Set layers opacity to 30%.

Styles	Color Overlay	ОК
Blending Options: Custom	Blend Mode: Normal	#969fa2 Cance
Drop Shadow	Opacity:	100 % New Sty
Inner Shadow		
Outer Glow		V Previ
Inner Glow		
Bevel and Emboss		
Contour		
Texture		
Satin		
Color Overlay		
Gradient Overlay		
Pattern Overlay		
Stroke		

Then duplicate merged Words layer and place it under merged Words layer.

Then go to **Filter - Blur - Motion Blur** and apply following settings.

Set layer opacity to 15%.

Add text under your title if you want.

reatures sticken ACTICE discuss simple Normachine of the SOCIE discuss simple Normathing of the SOCIE discuss simple SOCIE IRE ICE' NATE INTONCOLLAFO INTONCOL	ommune infinity Pics humanity pics humanity pics humanity pics humanity pics humanity pics humanity pics humanity ds bitters trend PRIDEr TION servic onfec rouse vere ramity yone - tamity RISE FRENDSH	INGE lowan id psycho mence encoura OME: scho bless FREEL Fri MU: 2 DAR, dvide RING ** ON mail harity id structive CARE cool desig peondesig	DEFENDENC Interainment breative siness avs en istain: cow ki point: hec nabbits is BEC se oDAY in great is BEC se oday in our time rASS ver
"When you make peace	e with yourself, you ma	ake peace with the world	Moha Ghosananda

Step 8 - Final Touches

Locate your PEACE text layer and lower its opacity to 4%.

Create new layer, go to **Image - Apply Image**, then go to **Filter - Render - Lightning Effects** and apply the following settings.

Lighting Effects	
	Style: Default
	Light type: Spotlight
	Focus: Narrow 69 Wide Properties:
	Material: Material: <t< td=""></t<>
	Texture Channet: None V White is high Height: Flat S0 Mountainous

Set layers opacity to 30%, and we're done.

I also added a gradient map to one of the letter layers.

Here's final result.
