

Mr. Giansante

Maze Game Website

February 2019

Project - Maze Game

Instructions

Create a folder called "mazegame".

You will have 17 html documents inside this folder.

```
index.html (contains instructions, etc.)
room01.html
room02.html
room03.html
...
room16.html
```

Create a sub-folder called "buttons".

Place the four images that represent the North, South, East and West buttons inside.
(these images are available in a ZIP File on the website)

Create a sub-folder called "rooms".

Place the 15 images that represent rooms inside.
(these images are available in a ZIP File on the website)

Code for room01.html

For this example, we will assume that from Room 1 the person can travel South or East.

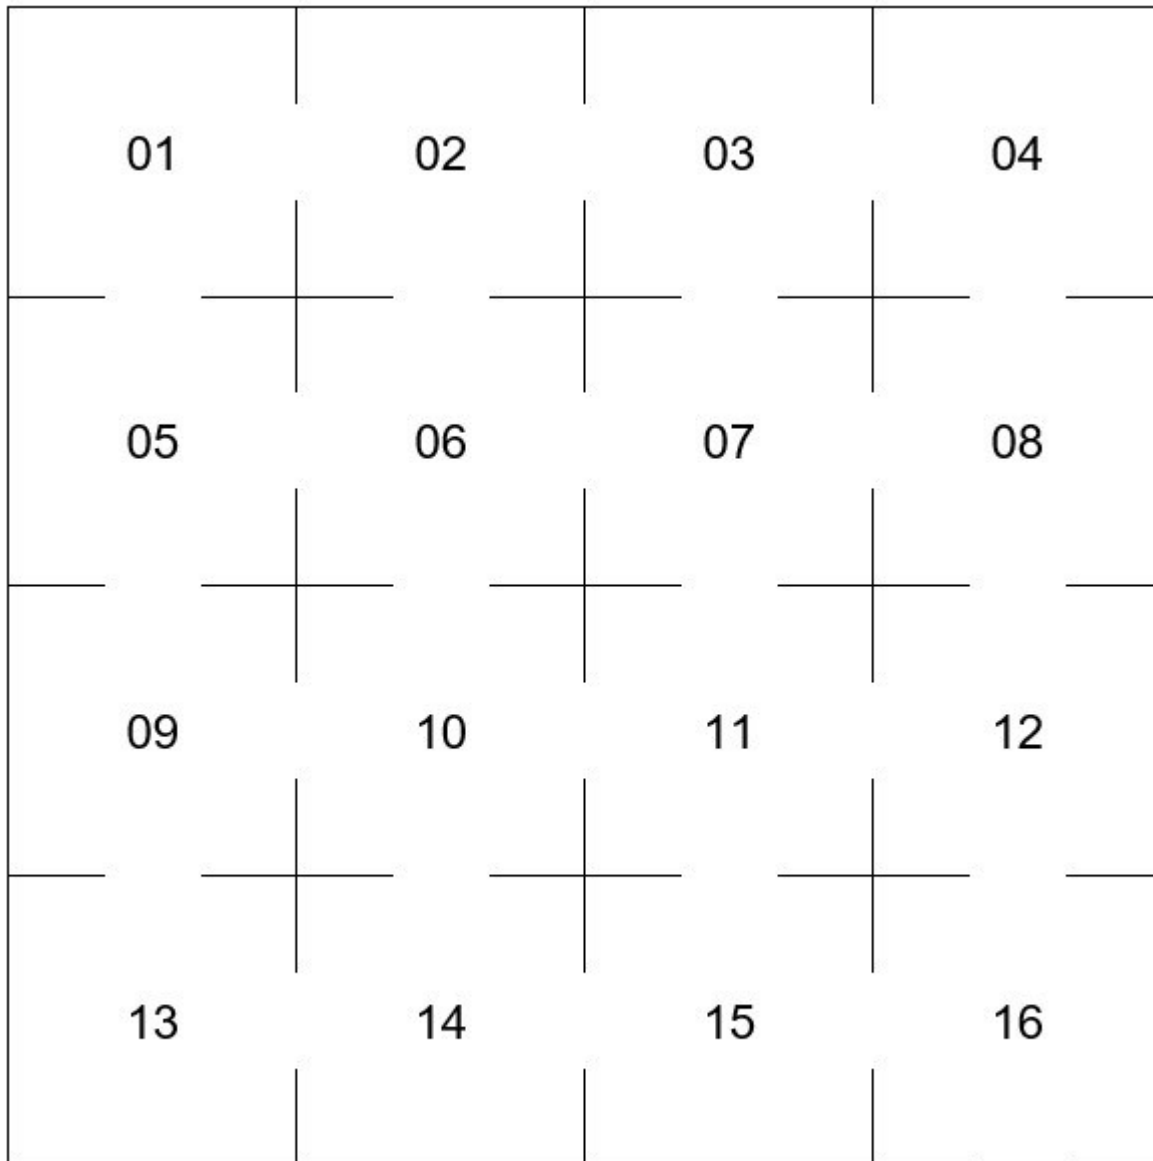

```
<html>
<head>
<title>Maze Game - Room 1</title>
</head>
<body>
<!-- Show the South Button - Send the player to Room 5 if they click it -->
<a href="room05.html"></a>
<!-- Show the East Button - Send the player to Room 2 if they click it -->
<a href="room02.html"></a>
<br clear="all" /><br />
<!-- Show the Room Graphic with doors to the South and west -->

</body>
</html>
```

Now, you can copy this file 15 times and modify the contents accordingly.

Project - Maze Game

Fill in the spaces where there are no doors.
Keep this sheet - you will need it when your assignment gets marked.
